

Pacgate AI Phase 1 Clarification Workboard

Temporary scope-and-response board for the current customer clarification loop

Generated: 2026-06-01

This print version keeps the short answer first, followed by the reason, evidence, and next action for each card.

Inbox (2 cards)

ENTRY-001 · Section X

Select the first lawyer entry surface before designing richer intake

Priority: Medium | Category: Valid | Owner: Pacgate | Handling: 1 / 2 | Pack: C

Question refs: X-1, X-2, X-3, X-4, X-5, X-6

Plain answer

Answer by naming the first lawyer-facing surface and ranking richer customer-entry channels as later options.

Why it matters

The client is mixing day-one lawyer entry points with later client intake and automation surfaces.

Evidence

Questions X-1 to X-6.

Next step

Pacgate should choose the first surface it most wants to trial.

LICENSE-001 · Section XIV

Reserve final open-source commercialization interpretation for legal review

Priority: Medium | Category: Needs Clarification | Owner: Legal review | Handling: 5 | Pack: C

Question refs: XIV-1, XIV-2, XIV-3, XIV-4, XIV-5, XIV-6

Plain answer

State Pacgate ownership over its own adaptation assets while reserving final commercialization interpretation to legal review against the relevant licenses.

Why it matters

The client is asking about ownership and commercialization rights on top of multiple upstream open-source systems.

Evidence

Open-source compliance questions XIV-1 to XIV-6.

Next step

Keep the client answer precise and avoid overconfident license claims.

Triaged (6 cards)

SCOPE-001 · Section I

Restate Phase 1 as a local pilot

Priority: High | Category: Valid | Owner: Joint | Handling: 1 | Pack: A

Question refs: I-1, I-2, I-6

Plain answer

Open the reply by stating that Phase 1 is a local legal AI pilot and deployment-support package, not a finished SaaS platform.

Why it matters

The questionnaire keeps drifting toward a completed platform build.

Evidence

Proposal positioning and current quote structure.

Next step

Keep this language in the cover reply and Annex A.

HARDWARE-002 · Section II

Answer capacity with target ranges

Priority: High | Category: Needs Clarification | Owner: Cubecloud | Handling: 5 | Pack: B

Question refs: II-5, II-6, II-7, II-8

Plain answer

Use target ranges tied to final GPU, model list, and quantization path rather than unconditional numbers.

Why it matters

The client is asking for exact model and concurrency claims before the final hardware is frozen.

Evidence

Capacity depends on the final BOM and active workload definition.

Next step

Keep hard numbers pending until procurement is confirmed.

CLAUDE-001 · Section V

Correct the fully local Claude for Legal assumption

Priority: High | Category: Error | Owner: Joint | Handling: 5 | Pack: C

Question refs: V-2, V-3, V-4

Plain answer

Position this as an adaptation reference for Pacgate's internal-lawyer workflow rather than a blanket promise of a finished, ecosystem-free local product.

Why it matters

The client is treating the upstream project as if it were already a standalone local product delivery.

Evidence

Claude for Legal public README emphasizes plugin and managed-agent patterns.

Next step

Keep the corrective note in Annex C and the reply letter.

LAVERN-001 · Section VI

Correct the Lavern product-readiness assumption

Priority: High | Category: Error | Owner: Joint | Handling: 5 | Pack: C

Question refs: VI-1, VI-2, VI-3, VI-4, VI-6

Plain answer

Describe Lavern as a strong prototype and workflow reference with local capability, while keeping its maturity claims grounded.

Why it matters

The client is reading Lavern as if it were already a production SaaS kernel ready to be dropped in.

Evidence

Lavern's public materials explicitly say it is not a finished product.

Next step

Keep this correction visible anywhere System 2 is described.

KNOWLEDGE-001 · Section IX

Reframe Package 3 as starter authority and knowledge structure

Priority: High | Category: Valid | Owner: Joint | Handling: 1 | Pack: C

Question refs: IX-1, IX-2, IX-3, IX-4, IX-5, IX-6

Plain answer

State that Package 3 provides structure, governance, and starter enablement rather than a finished full legal corpus.

Why it matters

The client is reading Package 3 as if it includes a complete legal content build-out.

Evidence

Questions IX-1 to IX-6 plus the current proposal language.

Next step

Anchor this explanation in Annex C.

SECURITY-001 · Section XI

Turn security questions into one boundary table

Priority: High | Category: Valid | Owner: Joint | Handling: 1 / 2 | Pack: B

Question refs: XI-3, XI-4, XI-5, XI-6, XI-7

Plain answer

Use one table for logging, isolation, disclaimers, remote support, and egress conditions instead of answering them as scattered prose.

Why it matters

The current question set is really asking one boundary question through several angles.

Evidence

Questions XI-3 to XI-7 and related deployment concerns.

Next step

Keep this table aligned with Annex B and Annex C.

Needs Research (2 cards)

CLAUDE-003 · Section V

Decide the right entry surface and identity depth for System 1

Priority: Medium | Category: Needs Clarification | Owner: Joint | Handling: 2 / 5 | Pack: C

Question refs: V-7, V-9, V-10, V-11, V-12

Plain answer

Answer this by naming the initial user surface first and treating deeper identity features as a later layer if needed.

Why it matters

The client asks for concurrent use, multiple tools, personal workspaces, and account isolation before the pilot surface is frozen.

Evidence

These features depend on the selected surface, not just on the model path.

Next step

Keep this as a scoped design decision, not a generic yes-to-everything answer.

KNOWLEDGE-003 · Section IX

Keep vector and graph implementation details pending

Priority: Medium | Category: Needs Clarification | Owner: Cubecloud | Handling: 5 | Pack: C

Question refs: IX-7, IX-8, IX-9, IX-10, IX-11, IX-12, IX-13

Plain answer

Answer with architecture principles now and reserve exact implementation choices for the confirmed technical path.

Why it matters

The client asks for exact vector DB, embedding, chunking, reranking, and graph behavior before the pilot architecture is finalized.

Evidence

These are design-decision questions rather than fixed commercial promises.

Next step

Keep the starter structure commitment, not the final stack commitment.

Draft Response (9 cards)

SCOPE-003 · Section I

List the actual handover assets

Priority: High | Category: Valid | Owner: Joint | Handling: 1 / 2 | Pack: A

Question refs: I-4, I-5, I-7

Plain answer

Answer in terms of runnable systems, files, runbooks, credentials, and support boundaries instead of abstract package names only.

Why it matters

The customer wants to know what Pacgate will physically and operationally receive.

Evidence

Question cluster I-4 to I-7.

Next step

Turn this into a handover checklist in Annex A.

HARDWARE-001 · Section II

Freeze a pre-procurement BOM annex

Priority: High | Category: Needs Clarification | Owner: Cubecloud | Handling: 5 | Pack: B

Question refs: II-1, II-2, II-3, II-4

Plain answer

Use one BOM annex to confirm node roles, host models, Dock path, GPU choice, and support assumptions.

Why it matters

Line-by-line hardware answers will be risky until the exact purchase path is confirmed.

Evidence

Hardware questions II-1 to II-4 are procurement-shaping questions.

Next step

Use Annex B as the controlled reply surface.

HARDWARE-003 · Section II

Name what migrates forward from pilot hardware

Priority: Medium | Category: Valid | Owner: Joint | Handling: 1 / 2 | Pack: B

Question refs: II-9, II-10, II-15, II-16

Plain answer

State clearly that configuration, knowledge structure, and operating practice should move forward even if production hardware later changes.

Why it matters

The customer is trying to avoid buying hardware that becomes stranded later.

Evidence

Migration and reuse questions II-9, II-10, II-15, II-16.

Next step

Frame the pilot machines as reusable development or backup assets if the platform scales later.

DEPLOY-001 · Section III

Describe staging and office handover

Priority: High | Category: Valid | Owner: Joint | Handling: 1 / 2 | Pack: B

Question refs: III-1, III-2, III-4

Plain answer

State that staging may happen before handover, with Pacgate given remote visibility before office-side acceptance.

Why it matters

The customer wants certainty about where the systems are first built and how acceptance becomes visible.

Evidence

Deployment flow questions III-1, III-2, III-4.

Next step

Use the deployment timeline in Annex B.

CUBECLOUD-001 · Section IV

List the enabled Cubecloud components

Priority: Medium | Category: Valid | Owner: Cubecloud | Handling: 1 | Pack: B

Question refs: IV-1, IV-2

Plain answer

Provide a simple component table showing which modules are active in Phase 1 and their practical purpose.

Why it matters

The client needs to know which named components are real parts of this pilot and what they do.

Evidence

Questions IV-1 and IV-2.

Next step

Use a plain inventory table rather than marketing language.

CUBECLOUD-002 · Section IV

Separate exportable assets from service dependency

Priority: High | Category: Needs Clarification | Owner: Cubecloud | Handling: 5 | Pack: B

Question refs: IV-3, IV-4, IV-5, IV-6

Plain answer

State which assets Pacgate can export and keep, and which capabilities depend on Cubecloud services or licensing posture.

Why it matters

The client is directly testing lock-in risk.

Evidence

Questions IV-3 to IV-6.

Next step

Keep the wording commercially precise and non-evasive.

CLAUDE-002 · Section V

Define the internal-lawyer pilot scenario

Priority: High | Category: Valid | Owner: Pacgate | Handling: 1 / 2 | Pack: C

Question refs: V-1, V-5, V-8, V-13, V-14

Plain answer

Choose a real internal legal scenario and make that the named minimum acceptance case for System 1.

Why it matters

Acceptance will stay vague unless System 1 is tied to one concrete lawyer workflow.

Evidence

Questions V-1, V-5, V-8, V-13, V-14.

Next step

Pacgate should nominate the scenario; Cubeccloud should support the run path.

LAVERN-002 · Section VI

Define the smallest viable System 2 closed loop

Priority: High | Category: Valid | Owner: Joint | Handling: 1 / 2 | Pack: C

Question refs: VI-5, VI-7, VI-8, VI-14, VI-15, VI-16, VI-17

Plain answer

Define a minimum loop of intake, structured analysis, draft output, lawyer approval, and controlled release.

Why it matters

The customer wants more than a backend demo; it wants a believable service loop.

Evidence

Questions VI-5, VI-7, VI-8, VI-14 to VI-17.

Next step

Make this the acceptance anchor for System 2.

OPERATIONS-001 · Section VII / VIII

Write the Pacgate-versus-Cubeccloud operating split

Priority: High | Category: Valid | Owner: Joint | Handling: 1 / 2 | Pack: C

Question refs: VII-1, VII-2, VII-3, VII-4, VII-5, VII-6, VIII-1, VIII-2, VIII-3, VIII-4, VIII-5

Plain answer

State that Pacgate owns playbook and legal operating logic, while Cubeccloud owns deployment support, validation, troubleshooting, and technical scaffolding.

Why it matters

The customer wants to know who owns legal logic and who owns technical realization.

Evidence

Questions in clusters VII and VIII.

Next step

Use this role split consistently across the reply and Annex C.

Ready To Send (6 cards)

SCOPE-002 · Section I

Describe System 2 as a direction, not a locked Phase 2 architecture

Priority: High | Category: Needs Clarification | Owner: Joint | Handling: 5 | Pack: A

Question refs: I-3, I-8

Plain answer

Acknowledge that System 2 explores future commercialization, but avoid saying that Phase 2 architecture is already decided.

Why it matters

The client is already reading the prototype path as if the next platform design is fixed.

Evidence

Current proposal defers full SaaS design to a later decision.

Next step

Keep the clarification in the reply letter and Annex D.

DEPLOY-002 · Section III

Publish a local data-flow statement

Priority: High | Category: Valid | Owner: Joint | Handling: 1 | Pack: B

Question refs: III-5, III-6, III-7

Plain answer

Use one boundary statement showing where files, prompts, outputs, indexes, and logs sit by default and when egress can occur.

Why it matters

Data-location clarity is a core trust issue, not a side detail.

Evidence

Questions III-5 to III-7 and security concerns in XI.

Next step

Keep the final wording aligned with Annex B and Annex C.

DEPLOY-003 · Section III

Document offline behavior and remote admin limits

Priority: High | Category: Valid | Owner: Cubecloud | Handling: 1 / 2 | Pack: B

Question refs: III-8, III-9, III-10

Plain answer

Separate locally available functions from any external dependency and document how remote admin is governed and later shut off.

Why it matters

The client is testing whether local control is real or only nominal.

Evidence

Questions III-8 to III-10.

Next step

Treat this as a security and operations note, not a casual promise.

LAVERN-003 · Section VI

Treat external intake channels and seed-customer testing as optional layers

Priority: Medium | Category: Valid | Owner: Commercial | Handling: 2 / 3 | Pack: C

Question refs: VI-9, VI-10, VI-11, VI-12, VI-13

Plain answer

Answer these as optional extensions or later pilot layers rather than fixed current deliverables.

Why it matters

Real external intake and seed-customer testing can be useful, but they are not automatically part of the pilot quote.

Evidence

Questions VI-9 to VI-13 are about richer client-entry behavior.

Next step

Reference Annex D if the client wants these priced later.

KNOWLEDGE-002 · Section IX

Keep external authority and internal experience clearly separated

Priority: High | Category: Valid | Owner: Joint | Handling: 1 | Pack: C

Question refs: IX-14, IX-15, IX-16, XI-1, XI-2

Plain answer

Make provenance visible and ensure that lawyers can confirm, reject, and prioritize different source types.

Why it matters

The customer is rightly concerned about mixing authority with internal guidance.

Evidence

Questions IX-14 to IX-16 and XI-1 to XI-2.

Next step

Use this as a governance principle across the reply pack.

ACCEPT-001 · Section XIII

Split acceptance by system and milestone

Priority: High | Category: Valid | Owner: Joint | Handling: 1 | Pack: A

Question refs: XIII-1, XIII-2, XIII-3, XIII-4, XIII-5, XIII-6, XIII-7, XIII-8

Plain answer

Break acceptance into environment, System 1, System 2, and handover evidence layers.

Why it matters

A single generic acceptance line will not hold once both systems and handover outputs are reviewed separately.

Evidence

Questions XIII-1 to XIII-8.

Next step

Keep the matrix in Annex A and reference it in the reply letter.

Deferred / Out Of Scope (2 cards)

HARDWARE-004 · Section II

Keep Phase 2 server options out of the fixed pilot

Priority: High | Category: Out of Scope | Owner: Commercial | Handling: 3 | Pack: D

Question refs: II-11, II-12, II-13, II-14, II-17, II-18

Plain answer

Offer these as later options in Annex D rather than expanding the fixed Phase 1 commitment.

Why it matters

Future production workstation and server comparisons belong to a later budget decision.

Evidence

These questions describe a later commercialization posture, not the current pilot purchase only.

Next step

Keep the future server path in the non-binding options note.

PHASE2-001 · Section XII

Keep Phase 2 platform questions in a separate options note

Priority: High | Category: Out of Scope | Owner: Commercial | Handling: 3 | Pack: D

Question refs: XII-1, XII-2, XII-3, XII-4, XII-5, XII-6, XII-7, XII-8, XII-9, XII-10

Plain answer

Answer them directionally in Annex D without converting them into current fixed commitments.

Why it matters

The client's platform questions are useful, but they belong to a different commercial decision than the current pilot quote.

Evidence

All questions in cluster XII are platform-stage questions.

Next step

Keep Annex D explicitly non-binding.
